Photovoltaic solutions

for architectural integration on the façade

PHOTOVOLTAICS IN ANY STYLE!

Sunerg Solar offers latest-generation photovoltaic modules particularly suitable for use on facades. They are available in different colors and powers. Installation is possible on both new and existing buildings, giving a completely new appearance. These modules are mounted on the facade of the building, above the existing structure, increasing the charm of the building and its resale value. The photovoltaic module becomes an integrated part of the external structure.

SUNERG SOLAR proposes the **BERGAMI T1** system a smart and flexible system that has innumerable advantages compared to the technical market standard.

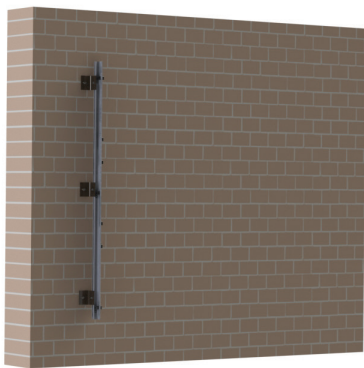

The **BERGAMI T1** system, with a vertical rubber door for closing the central joint between the panels, offers the possibility to modulate the paneling of the coatings with a simplicity and flexibility to satisfy every concept architectural use.

The study of the **T1 system**, through the adoption of specific anchoring systems to be applied on the external facade, offers all the advantages of the exclusive T pillar with hidden grout lines and a “free” modularity, thanks to its hooking peg system split.

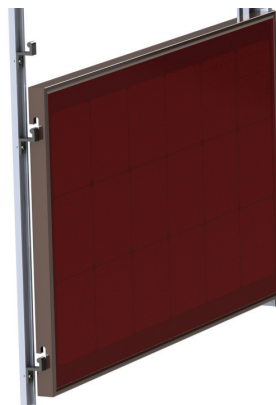

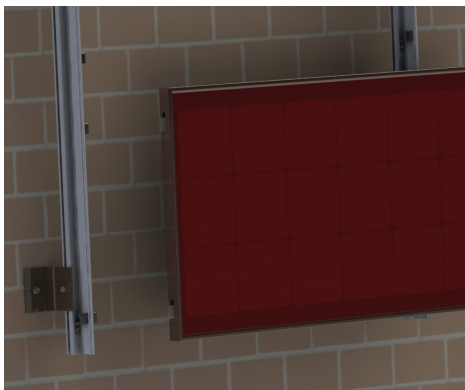

BERGAMI T1 system

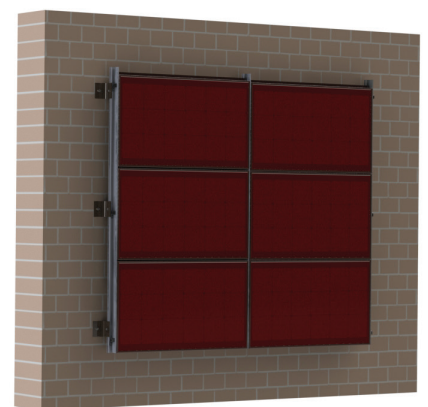

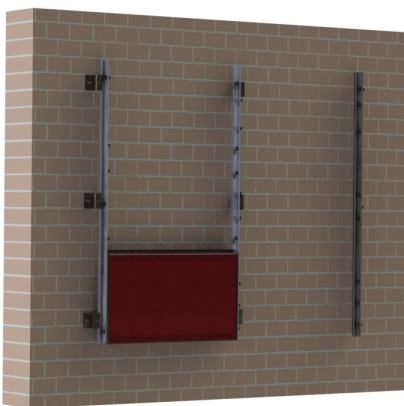

REALIZATION STEPS

1 Apply T1 profiles to the vertical structure of the building.

2 Snap-fit the module in the structure.

3 It is possible to create façades with various modules according to your needs..

FAÇADES BECOME ACTIVE AND BEAUTIFUL!
